$\checkmark \quad$ Log in as "advanced user" to change all settings.
$\checkmark$ Sensors on same bus (COM1, COM2 or COM3) must have different addresses but same Data Format (baud rate, parity and stop bit). Changes can be done with the Si-Modbus configurator (download from www.imt-solar.de).
$\checkmark$ This document applies to all sensors with firmware version 1.53 or greater (see sensor label for firmware version).

1. COM Port Settings:

Choose Settings tab and from Comm. Param. $\rightarrow$ RS485 and set the communication parameter for the EMI accordingly with instruction provided. The factory default settings are 9600 Baud / Parity: None /
Stop Bit: 1. For individual settings see the backside of the sensor. Click Submit.

2. Navigate to Maintenance and from Device Mgmt. $\rightarrow$ Connect Device. Click Add Devices. Add a MODBUS device for each sensor.

Choose the settings in the pop-up window, use EMI as Device Type and Modbus-RTU as Connection Mode.
Choose the port which you have connected the sensor to. The default address is $\mathbf{1}$, individual settings are on the backside of the sensor.
The device in the WebUI is now named EMI (COM3-1).
3. Change the running parameters.

Navigate to the Monitoring tab and select the device to change on the left side and click Running Param.

Set-up the following data for all sensors:

|  | EMI model | Other |  |  |
| ---: | :--- | :--- | :---: | :---: |
|  | Do not use the model Ingenieurbüro Si-RS485TC ! |  |  |  |
| Synchronize Environment Data | Disable | Master/Slave |  | slave mode |
| Read function code | Read input register 04H |  |  |  |
| Data reporting mode | Integer |  |  |  |
| Word ordering | Big endian |  |  |  |
| Read mode | Multiple read |  |  |  |
| Start address | 0 |  |  |  |
| End address | = highest signal address $(7,8$ or 9$)$ used. |  |  |  |

The End address has to equal the highest Signal address ( 7,8 or 9 , see page 3-5) used.

Change the following data according to the sensor type connected, whereas the signal address has to be understood as Modbus register (value 65535 means not available, offset stays 0.0):

The cell temperature is a roughly approximation for the PV module temperature when using signal address 7.

| No. | Signal Name | Signal address | Offset |
| :---: | :---: | :---: | :---: |
| 1 | Total irradiance | 0 |  |
| 2 | Ambient temperature | 65535 | 0.0 |
| 3 | PV module temperature | 7 | 0.0 |
| 4 | Wind speed | 65535 |  |
| 5 | Wind direction | 65535 |  |

## Si-RS485TC-2T -MB

PV module temperature $\approx$ Cell temperature

| No. | Signal Name | Signal address | Gain | Offset |
| :--- | :--- | :--- | :--- | :--- |
| 1 | Total irradiance | 0 | 0 |  |
| 2 | Ambient temperature | 8 | 10 | 0 |
| 3 | PV module temperature | 7 | 10 | 0.0 |
| 4 | Wind speed | 65535 | 10 | 0.0 |
| 5 | Wind direction | 65535 |  | 10 |
|  |  |  |  |  |

## Si-RS485TC-T-Tm-MB

| No. | Signal Name | Signal address | Gain | Offset |
| :--- | :--- | :--- | :--- | :--- |
| 1 | Total irradiance | 0 | 10 |  |
| 2 | Ambient temperature | 65535 | 10 | 0.0 |
| 3 | PV module temperature | 8 | 10 |  |
| 4 | Wind speed | 65535 |  | 10 |
| 5 | Wind direction | 65535 |  | 1 |

## Si-RS485TC-2T-v-MB + Tamb-Si + Vwind-Si

PV module temperature $\approx$ Cell temperature

| No. | Signal Name | Signal address | Gain | Offset |
| :--- | :--- | :--- | :--- | :--- |
| 1 | Total irradiance | 0 | 10 |  |
| 2 | Ambient temperature | 8 | 10 | 0.0 |
| 3 | PV module temperature | 7 | 10 | 0.0 |
| 4 | Wind speed | 3 |  | 10 |
| 5 | Wind direction | 65535 | 1 |  |
|  |  |  |  |  |

## Si-RS485TC-2T-v-MB + Tmodul-Si + Vwind-Si

| No. | Signal Name | Signal address | Gain | Offset |
| :--- | :--- | :--- | :--- | :--- |
| 1 | Total irradiance | 0 | 10 |  |
| 2 | Ambient temperature | 65535 | 10 | 0.0 |
| 3 | PV module temperature | 8 | 8 | 0 |
| 4 | Wind speed | 3 | 10 |  |
| 5 | Wind direction | 65535 | 10 |  |
|  |  |  |  |  |

Si-RS485TC-3T-MB

| No. | Signal Name | Signal address | Gain | Offset |
| :--- | :--- | :--- | :--- | :--- |
| 1 | Total irradiance | 0 | 10 |  |
| 2 | Ambient temperature | 8 (when Tamb-Si at socket 1) | 10 | 0.0 |
| 3 | PV module temperature | 9 (when Tmodul-Si at socket 2) | 10 | 0.0 |
| 4 | Wind speed | 65535 | 10 |  |
| 5 | Wind direction | 65535 | 1 |  |
|  |  |  |  |  |

## Ta-ext-RS485-MB

| No. | Signal Name | Signal address | Gain | Offset |
| :--- | :--- | :--- | :--- | :--- |
| 1 | Total irradiance | 65535 |  |  |
| 2 | Ambient temperature | 8 | 10 | 0 |
| 3 | PV module temperature | 65535 | 10 | 0.0 |
| 4 | Wind speed | 65535 | 10 | 0.0 |
| 5 | Wind direction | 65535 |  | 10 |
|  |  |  |  |  |

## Tm-RS485-MB

| No. | Signal Name | Signal address | Gain | Offset |
| :---: | :---: | :---: | :---: | :---: |
| 1 | Total irradiance | 65535 | 10 |  |
| 2 | Ambient temperature | 65535 | 10 | 0.0 |
| 3 | PV module temperature | 7 | 10 | 0.0 |
| 4 | Wind speed | 65535 | 10 |  |
| 5 | Wind direction | 65535 | 1 |  |
|  |  |  |  |  |
